

Spring Data JPA - Hands On 1 Report

application.properties

```
spring.datasource.url=jdbc:mysql://localhost:3306/ormlearn
spring.datasource.username=root
spring.datasource.password=root
spring.jpa.hibernate.ddl-auto=validate
```

SQL

```
create table country(code varchar(2) primary key,name varchar(50));
insert into country values('IN','India');
insert into country values('US','United States of America');
```

Country.java

```
@Entity
@Table(name="country")
class Country{
    @Id String code;
    String name;
}
```

CountryRepository.java

```
@Repository
interface CountryRepository extends JpaRepository<Country,String>{}
```

CountryService.java

```
@Service
class CountryService{
    @Autowired CountryRepository repo;
    @Transactional
    List<Country> getAllCountries(){return repo.findAll();}
}
```

OrmLearnApplication.java

```
ApplicationContext context=SpringApplication.run(OrmLearnApplication.class,args);
CountryService service=context.getBean(CountryService.class);
System.out.println(service.getAllCountries());
```

Expected Output

```
Inside main
Start
[Country{code=IN,name=India}, Country{code=US,name=United States of America}]
End
```
